

ABSTRACT OF THE DISCLOSURE

A cooking device includes a pivot unit disposed below and interconnecting pivotally bottom surfaces of two tray halves of a tray unit to permit pivotal movement of the tray halves between extended and folded positions. The tray halves have inner sides contacting each other and defining a seam therebetween, and top surfaces flush with each other for providing a large cooking area when the tray halves are disposed at the extended position. An oil-collecting member is mounted on the bottom surface of one of the tray halves, and spans the width of the seam for collecting oil that permeates through the seam.
